Letter of application

I am writing ti apply for position of a junior software developer which appeared in the pracuj.pl list of offers.

I graduated in 2019. I completed a 3 month Google scholarship in writing Android applications. I am graduate of Mat-Fiz-Inf class from 3LO in Bydgoszcz. I believe that the education I got there in addition to my experience gained in my personal projects will provide me with good knowledge of software developers responsibilities. In November I will start my second year of bachelors degree in computer science at University of Łódź

My studies equipped me with lot of theoretical knowledge but I unfortunately I have no practical experience in the field and working for your firm would supply my with many opportunities to learn.

I am hard working and willing to learn. I have good interpersonal skills.I fluently speak English and know basics of Deutsch. I am familiar with Android Studio and Java programing language. So I think I would fit in great with your existing team of engineers.

$$x = \frac{x \times \alpha}{-x \times \beta} \tag{1}$$

I always wanted to work for a firm that focuses on rapid development and uses the most recent frameworks for mobile development.

I will be available for an interview at any time convenient to you. In the attachment I enclose my CV.

Yours faithfully
Mateusz Kojro
